1. Verify that the parking brake is adjusted properly. If necessary, adjust it, being sure to follow the manufacturer's procedure.
2. Check the parking brake indicator light by turning the ignition key to the run position (do not start the engine) and observing the brake-warning lamp on the dash. Apply and release the parking brake.

**a. List your observations:**

**NOTE** If the parking brake light did not go off, check the level of brake fluid in the master cylinder reservoir. If low, top up with the specified brake fluid. If it still is on, research the diagnostic procedure in the service information.

4. Apply the parking brake. Ensure that no people, tools, or equipment are in front of or behind the vehicle. With instructor permission, start the vehicle and verify that the parking brake properly holds the vehicle when placed in drive and reverse.

**NOTE** Use extreme caution when performing this test. If the vehicle moves, stop.

**a. Does the parking brake hold the vehicle? Yes: \_\_\_\_\_ No: \_\_\_\_\_**

**5. Determine necessary action(s):**

6. Have your supervisor/instructor verify satisfactory completion of this procedure, any observations found, and any necessary action(s) recommended.
